

**WITH MANY YEARS** of experience working in remote regions of Canada and worldwide, Axsera's specialists understand the challenges of designing, installing, and maintaining wireless telecommunications for harsh environments. Axsera provides solutions based on customer requirements.

# Custom Telecom Solutions for MINING OPERATIONS

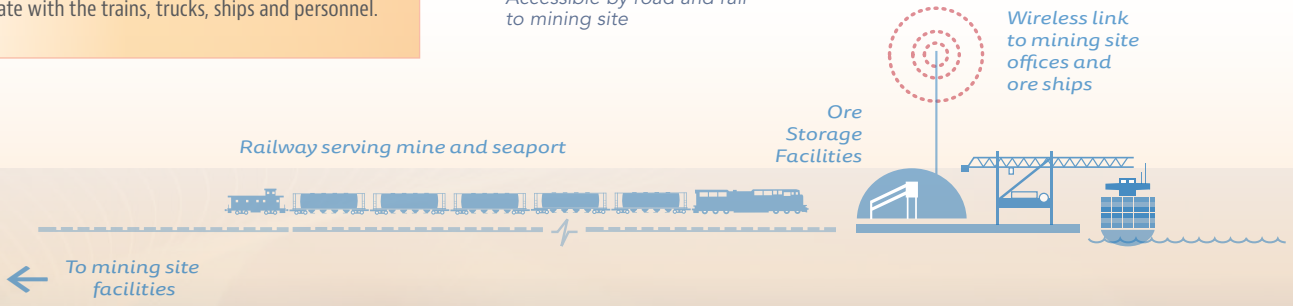

Mining and processing of minerals are performed within a secure perimeter. A private wireless network covers the entire area, providing secure communications to all buildings, vehicles, and personnel.

Microwave radio connects the regional head office with the seaport area. In the region of the transportation hub, a private wireless network enables the administration to communicate with the trains, trucks, ships and personnel.

## SEAPORT

Accessible by road and rail to mining site

Axsera's headquarters, conference facilities, and laboratories are located at:
